**How You Can Profit Alongside the Market Insiders with Price Action Manipulation Trading and Decode their Deceptions by Using Only Pure Bars and Charts.**
Introducing... XSPY TRADER

WHAT IS XSPY TRADER?

You’ve heard the horror stories; you may even know someone who lost thousands in the stock markets. Why are trading disasters so common? It’s because most traders are not aware that the markets are manipulated, and our only way to profit is by trading with the market makers.

XSPY TRADER aims to combat this plight. It’s designed to give you the unique “vantage point” to identify chart manipulations and price deceptions – by adopting a step-by-step trading plan with the skill of price action trading.

You will discover the hidden factors that truly drive price movements such as “phony” supply or demand, so you can buy into a winning trade way earlier while other retail traders keep waiting for “signals” that never show until it’s too late.

Using only four sets of standard bars and charts, you will learn to interpret the behaviours of market manipulators by detecting specific deviations in their prices.

No more complicated technical analysis and lagging indicators! With only simple price charts and ladders to follow, you can now trade confidently alongside market makers to achieve consistent returns.

WHY PRICE ACTION TRADING?

• You don’t need to worry about other complicated indicators to get your trade signals. You only need to focus on one indicator, and that’s price itself!

• You don’t need to constantly scan the news – there will always be a price action signal that will get you into a trade before the news event.

• You can make profitable use of higher time frames, as price action trading allows you to trade less frequently but with higher accuracy.

• It is the closest thing to what floor traders in the trading pits use to watch the actual price numbers. No more falling trap to lagging indicators and predicting market movements from every economic news release.

About Your Coach, ALSON CHEW

Alson is known in the trading industry for holding an unbroken track record of profiting every quarter since 2011 even through the Chinese stock market crash in 2015. Over the years, he achieved a total net profit of USD 1.2 million for his firm – earning him the firm’s Top Trader Award twice in a row.

Alson’s insider knowledge as a pro trader gave him access to market news and whispers. He soon realised that the financial markets are manipulated and quickly adapted his trading tactics to trade alongside the manipulators and score handsome profits regardless of market conditions.

As an outstanding trader in the proprietary circle, Alson was honoured to receive a personal testimonial from the Senior Vice President of SGX, Mr. Rama Pillai, for his initiative in helping aspiring traders achieve financial success.

“Understanding Chart Manipulations While Managing Your Risks is Key to Profitable Trading!”
